ACUI CORE COMPETENCIES RUBRIC

he ACUI core competencies allow those who work in the college union and student activities fields to better understand the foundation of knowledge and expertise required to be successful in these fields. The following rubrics adapt the core competencies to allow individuals to reflect on their skills and recognize opportunities for growth.

Each rubric corresponds to one of the ACUI core competencies and lists outcomes for the competency across four levels: basic, intermediate, advanced, and expert.

For each competency, those placing themselves in the basic level have a general level of knowledge related to the competency but possess a limited demonstrated level of skill and experience in relation to that competency. If an individual does not yet meet the benchmarks for the basic level of a competency, those can serve as goals for that individual to strive toward.

Individuals in the intermediate level have a more than a basic level of knowledge and can perform tasks related to that competency with supervision.

Individuals placing themselves in the advanced level can perform tasks related to the relevant competency without supervision and possess a wide breadth of knowledge related to the competency.

Those who identify with the expert level possess a comprehensive and authoritative level of knowledge related to the competency and can supervise and mentor others. Although the word "expert" is used for the final level, it is important to remember that the knowledge related to the competencies can change over time and individuals should continue to educate themselves on changing trends.

HOW TO USE

ACUI members may use the rubrics to determine their competency level for the ACUI competencies. The rubrics can be used as a full set or individually. To use the rubrics, an individual should set aside time to reflect on their knowledge and experiences related to a particular competency. If possible, they should consider gathering materials to use as evidence of their knowledge and experience related to a competency. While an individual may identify with concepts in several levels of a rubric, the level with which they most identify is the level they should select. For some competencies, movement through the rubric may not be a straight trajectory. Individuals may find that they move backward or forward within the rubric as they gain new knowledge.

After completing the rubric, individuals should create an action plan to develop the skills and knowledge necessary to move to the next level within that competency. They should consider ways to gain experience both through their job and through ACUI programs and volunteer position.

Assessment, Evaluation, & Research

BASIC

INTERMEDIATE

ADVANCED

EXPERT

Possesses basic knowledge of assessment, evaluation, and research, focused on assessment tools and implementation and research methods. Can readily duplicate and implement previously employed assessments. Able to interpret and understand results to improve initiatives. Demonstrates awareness that an ethical component of data analysis exists and a basic proficiency with the technology used to collect and analyze data. Understands implications of assessment, evaluation, and research on work cycle. Demonstrates ability to create, employ, and analyze assessment and research as well as the knowledge and ability to communicate data in an ethical manner. Uses relevant theory to design assessment, evaluation, and research efforts. Consistently employs and communicates data with integrity and in a socially just manner, especially while contributing to the scholarly community. Ability to communicate findings and value of data to a variety of audiences, incorporating language into institutional priorities and values.
